

BULKHEADS

BULKHEADS

HIGH MARK'S BULKHEADS — A MODERN APPROACH TO AN AGE-OLD CONCEPT

If you thought bulkheads were simple boxes made to hide the service utilities to washing machines while making machine repairs difficult, think again.

High Mark Manufacturing, Inc.'s bulkheads are delivered ready to install and are also easily accessed for servicing, shaving time and expense down considerably.

High Mark bulkheads come in widths of 14.5 inches, 22.5 inches and 30 inches, but we make the length to your specifications. And because our bulkheads are an Underwriters Laboratory-listed appliance, buyers can finance them with the other equipment they purchase for their laundry facility and depreciate their value on future tax returns.

Install High Mark Manufacturing bulkheads and find out just how you can make operating a laundry facility simpler and more affordable.

Our standard bulkhead features include:

- Quarter-turn stainless steel ball valves that allow for easier shut on/off water service
- A galvanized rectangular tube steel bulkhead frame, sealed from rust and immune to rot, while requiring fewer supports and providing easier access to the back of washing machines

- Medex board cover panels so they are nonporous and water-resistant

Optional features:

- Doors installed on one end of the bulkhead provide the easiest access possible
- High-pressure plastic laminate, available in 200 different colors, at one price
- Copper water lines in lieu of AquaPEX plastic
- Hot water-return line provides instant hot water even in bulkheads farthest from utility rooms
